

## SEWAGE AND WASTE WATER SYSTEMS

Services/Designs provided for:

- ❑ Act 537 Plans
- ❑ Feasibility Studies
- ❑ Rates and Financial Feasibility
- ❑ Grants and Loan Applications
- ❑ Sewage Treatment Plants
- ❑ Collection Systems
- ❑ Lift Stations/Pumps
- ❑ Rights-of-Way
- ❑ Manholes and Cleanouts
- ❑ Sludge Drying Beds
- ❑ Lagoons
- ❑ On-Lot System Design
- ❑ Construction Inspection

Because of stringent environmental regulations and the failure of many pre-existing on-lot type sewage treatment methods, public sewers serve as the most cost effective solution to present day waste water problems.

In addition to design plans and services in the most recent on-lot technologies, the firm has the experience in public sewage system design and has provided these services for projects throughout rural Pennsylvania for more than 40 years. As engineers, it is our goal to provide public sewers for your community or development project that are functional and can be constructed economically with low tap-on fees or user costs.

Our experienced staff has worked closely with all of the federal, state, and local government agencies and is familiar with current regulations. We are also ready to assist you with preliminary funding applications and general administrative paper work that may be required to initiate grant eligibility or low interest loans.

Our understanding of modern design and construction techniques needed for successful field construction will result in a cost effective design for your next sewer system project.
